

British Glass

## Position statement – reusables

*Sheffield – 30/09/2025:* The Government has signalled its intention to increase the use of reusable packaging over the next decade. Glass is the perfect product for reusable packaging and glass manufacturers already produce reusable products widely used across Europe and globally. Products currently in single use glass could be easily switched to reuseable glass, but the greatest environmental and health benefits would come from replacing single-use plastic and plastic-lined packaging with reusable glass. For this to happen, **the production and availability of glass packaging must be maintained in the coming years to protect both the environment and human health.**
